Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-6 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 5,196,100 to Goffetre et al.

3. Goffetre discloses an apparatus and method for film deposition equipped with a vacuum chamber (column 2, rows 46-49) capable of maintaining a vacuum therein, in which a film is deposited on surfaces of a substrate (30), which comprises a traveling means (motors, M1 and M2) for vertically traveling a continuous sheet as the substrate; and a pair of film deposition means (40a and 40b); said film deposition means being vertically arranged (one above the other) and horizontally faced each other; and said continuous sheet being traveled between a pair of the film deposition means.

4. With respect to claim 2, film deposition sources in said film deposition means are a pair of magnetron sputtering cathodes (column 2, rows 28-31).

5. With respect to claims 3-4, the courts have ruled that inclusion of material or article worked upon by a structure being claimed does not impart patentability to the claims. In re Young, 75 F. 2d 966, 25 USPQ 69 (CCPA 1935) (as restated in In re Otto, 312 F.2d 937, 136 USPQ 458, 459 (CCPA 1963)).

6. With respect to claims 5 and 6, the courts have ruled that expressions relating the apparatus to contents thereof during an intended operation are of no significance in determining the patentability of the apparatus claim. Ex parte Thibault, 164 USPQ 666, 667 (Bd. App. 1969).

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claim 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Goffetre et al. as applied to claims 1-6 and 8 above, and further in view of U.S. Patent No. 5,198,033 to Kelley et al.

9. Goffetre et al. disclose the invention substantially as claimed and as described above.

10. However, Goffetre et al. fail to teach the apparatus capable of supplying a specific tension range to a substrate to be processed.

11. Kelley et al. teach that the tension applied to a substrate to be processed is determined empirically since the degree of topography modification varies with material and other reaction parameters (column 5, rows 1-10).

12. It would have been obvious to one of ordinary skill in the art at the time the Applicant's invention was made to have empirically determined the appropriate tension range for a substrate to be processed based on properties of the substrate and other process parameters as taught by Kelley et al.

13. With respect to the specific material of the substrate and the weight of the substrate, as stated above, the courts have ruled that inclusion of material or article worked upon by a structure being claimed does not impart patentability to the claims. In re Young, 75 F. 2d 966, 25 USPQ 69 (CCPA 1935) (as restated in In re Otto, 312 F.2d 937, 136 USPQ 458, 459 (CCPA 1963)).
